

CUSTOMER TESTIMONIAL

Shirish Netke
CEO, Amberoon

Amberoon is an enterprise software company that helps banks reduce operational risk from money laundering and financial crimes using agile processes and modern technology.

We recently engaged Predecir to look at our cloud resource utilization in order to gain visibility and reduce our costs. PREDECIRx discovered that one of our servers was only used for just 2 days over a 6-month period. This was the visibility we were missing to effectively run our operations. Without this visibility we had paid full fare for our compute resources which were over-provisioned and under-utilized. Further, we do not see such visibility from any cloud provider.

PREDECIRx not only gives us an advanced indication of the health of our compute farm, but also provides insight into resource utilization, thus reducing any waste in our cloud operations costs.

As an early stage growth company, it is important for us to remove waste from our expenses. Furthermore, as a SAAS provider, we would like to scale our cloud resources as we onboard our customers in a predictable and cost-effective manner. PREDECIRx does this for us, by giving us full visibility into our cloud resource utilization including our compute, storage, and network resources.
